

Instrumentation Process Trainer

Model: 120-IPT

What Is Process Control?

Process control systems automate the monitoring and adjustment of complex manufacturing processes to consistently produce quality products. Used in a variety of continuous mass production industries, process control systems allow a few workers to control a large number of complex processes with a high degree of efficiency. Process control systems also improve safety, lower production costs, save energy, and decrease environmental impacts.

What Industries Use Process Control Systems?

Process control systems play an important role in most advanced manufacturing facilities, especially within industries focused on continuous mass production. Popular industries that rely heavily on process control include: power generation, oil and gas, chemical processing, pulp and paper, food and beverage, biotechnology, pharmaceuticals, semiconductors, plastics, petrochemicals, and water/wastewater.

What Types of Process Control Variables Are There?

Process variables can consist of anything that affects a physical or chemical process. The most common process variables fall into five major types: level, flow, temperature, analytical, and pressure. Analytical process variables are often called chemical variables, because they involve chemical properties like acidity. Other process variables include density, velocity, speed, stress, force, and weight.

Bayport Technical's Instrumentation Process Trainer (120-IPT) is a hands-on training unit for process operators and instrument technicians. The unit replicates real-world operating equipment and consists of separate functions all integrated into a compact, effective unit in order to safely train personnel.

The Instrumentation Process trainer features a wide variety of industry-standard equipment, including: a magnetic centrifugal pump; an acrylic water column; a tank; a 3/4 HP motor; four (4) loops with control valves and transmitters for flow, level, pressure, and temperature; an HMI touchscreen and PLC; a motor control center; a pneumatic supply regulator and gauges; and standard operating manuals.

SPECIFICATIONS

- Carbon steel chassis and supports with casters
- High durability powder coating on chassis and supports
- Industrial, 0-20 GPM magnetic centrifugal pump
- 6" x 5' acrylic water column
- 20-gallon polyethylene tank
- 3/4 HP motor
- Cooler
- Four (4) loops with control valves and transmitters: flow, level, pressure, and temperature
- Onboard DDC
- HMI (touch screen)
- Power control center
- Distribution panel with main breaker and individual circuit protection (motor control center)
- Clear PVC piping and PVC flanges for four process loops, operating simultaneously
- Pneumatic supply regulator and gauges
- Engineering, design, programming, and calibration
- Standard operating manuals

UTILITIES

- Requires 120V/60Hz/1ph electrical.

PRODUCT DIMENSIONS

- Coming soon.

Address

Bayport Technical
905 S. 14th Street
La Porte, TX 77571
